PROFESSIONAL SUMMARY

Senior Web Developer with 20+ years of experience, 0→1 from simple websites to complex corporate systems and APIs (including manual and automated testing); with over 15 years performing in agile/scrum environments.

PROFESSIONAL EXPERIENCE

Nisum - Full-Stack & SDET (Dec 2020 - Feb 2026)

- Rescued a high-risk, failing taxation API project within an Agile/Scrum environment, measured by 100% deficit recovery and on-time production deployment by introducing the trust triangle as relationship management and leading the integration with Vertex Tax Technology.
- Achieved 0% downtime during and after migration and completed the transfer of ~12 Terabyte (TB) of data (compliance, system and user-generated files, usage and telemetry logs) by integrating 10 system features with S3, implementing MinIO for development environments and creating a batch processing command to copy files.
- Stabilized a HIPAA-compliant production environment as measured by over 50% drop in peak resource utilization and zero subsequent server failures by normalizing + optimizing (indexing, queries, MySQL database, applying good practices and design patterns and migrating heavy business logic from front-end to high-performance backend services).
- Achieved a 100% adoption across 4 departments (EMR/EHR, CRM, RCM, GRC) as foundation for company-wide migration towards Playwright by creating a framework-agnostic Playwright + TypeScript framework from scratch, designing a sequential test-chaining engine that mirrors end-to-end journeys and creating a seamless database-agnostic data-hydration pipeline.

Stack and tools: PHP 8, Kotlin, PACT framework, Playwright, JavaScript, TypeScript, MySQL, AWS, Docker, GitHub, GitHub Actions, Selenium Web Driver, Appium, Kotlin, Cursor AI, Cursor Bug Bot, TestRail, Jira, Confluence.

DataArt - FE Developer & SDET (Aug 2017 - Oct 2018)

- Successfully optimized JavaScript (ES6+), React, and TypeScript UI architectures on fintech platforms (PAAS) for interest swap trading and all-trading data analysis, improving rendering latency by 70% to deliver highly responsive, real-time features such as a data grid handling 1,000+ continuous rows, data visualization and analysis (data points grouping and selection).

Stack and tools: JavaScript, TypeScript, React, Redux, Storybook, Drupal CMS, Java, Selenium Web Driver, AWS, GitHub, TestRail, Jira, Confluence.

BairesDev - Full-Stack Developer (Sep 2015 - Jul 2017)

- Architected a cross-platform session synchronization mechanism that supported over 2 million concurrent users during 1-hour of high-traffic during soft-launch on December 25th, enabling a seamless "continue watching" feature across web, mobile, smart TVs, and proprietary TV devices (Claro Video).
- Eliminated 300K BRL in recurring regulatory compliance fines from ANCINE by architecting an automated, audited TV schedule pipeline that replaced a disconnected offline legacy desktop system with a secure cloud infrastructure (VIACOM).

Stack and tools: JavaScript, TypeScript, Angular JS, Angular 2, Slim framework, Symfony framework, MySQL, Firebase, Wordpress CMS, PHP, AWS, Jira, Confluence.

Location World

Senior Software Engineer | May 2013 - Aug 2015

- Accelerated telemetry data auditing speeds by over 70%, reducing a multi-day manual investigation (I call it “data-wading”) to under 1 hour or less, by independently building a custom API and data-filtering dashboard to parse massive historical datasets
- Consequently, my “data-wading” tool catalyzed a new for-profit security feature and upsell revenue stream for premium customers, by uncovering a critical fleet risk that led to the integration of real-time Z-axis/altitude telemetry tracking (and most likely saving a life in the process).

Stack and tools: JavaScript, Angular JS, C#, Phalcon framework, Appium, Selenium Web Driver, Ms SQL Server.

A FEW HIGHLIGHTED PROJECTS

- ArtPlacer (2020, freelance): Integrating their main platform with Shopify payment and subscription APIs. The stack: PHP 8, Laravel 8, React, Elf (for state management), Liquid, MySQL.
- Estée Lauder (2019, freelance): Designed and developed a Proof of Concept (POC) virtual makeup platform to handle complex skin color metadata. The stack: Laravel 5.8, PHP 7.x, MongoDB, Flux, TypeScript, Material-UI, React.
- San Francisco Group (2013, freelance): Formulated an architectural solution within 2 hours and engineered a custom interactive directory in 48 hours following a total vendor default, salvaging a high-profile investor launch across 11 digital touch-screens with a prototype so stable it remained in production for over 2 years.
- Citi Oriente Ltd. (2007): Engineered a mission-critical oil production system, securing 100% regulatory compliance as Ecuador’s only on-time oil firm during a nationwide calculation update.

SPEAKING & TECHNICAL EVANGELISM

- Public Thought Leadership: Delivered 11 public technical keynotes across major industry events in Buenos Aires, including Campus Party (2nd Main Stage), Open Data Day, Mercado Libre and others.
- Partnered with different organizations, delivering presentations co-sponsored by employers and Meetup.com to foster local engineering communities.
- Advanced Tech Domain Coverage: Presented deep-dives on cutting-edge architectures, including WebAssembly, TensorFlow JS (Edge Computing/Smart Cities), Clean Code for Big Data, and high-performance asynchronous systems (ReactPHP/Redis).
- Internal Culture & Team Alignment: Spearheaded internal corporate tech-talks to upskill teams on desktop architecture (Electron JS), smart-city infrastructure, and advanced strategic facilitation frameworks (Lego Serious Play).

EDUCATION & CERTIFICATIONS

- Master of Business & Technology, University of San Andrés (Argentina, 2021)
- Systems & Networking Engineer, University Alfredo Pérez Guerrero (Ecuador, 2004)
- Certifications: ISTQB (2014), PMP (2009)
- Courses: Cultural Intelligence (2023), Public Speaking (2019), European Union Software Investments (2007), and more.
